Dear Hiring Team,

I am a Computer Engineering student at the University of Texas at Dallas, and I am excited to pursue opportunities where I can combine hands-on engineering with work that makes a meaningful difference for people. What draws me to engineering is not just the challenge of making something work; it is the possibility of making someone's day easier, safer, or more independent.

That motivation is central to SAAMOS, an offline assistive technology prototype I lead with a four-person team. We are developing a system that combines voice interaction, computer vision, and directional audio feedback for blind and low-vision users. As team lead and an audio software developer, I coordinate integration across the project and develop and test Python audio components. Working on SAAMOS has taught me to think about technical reliability alongside accessibility, practical constraints, and the needs of the person using the system.

My experience also spans embedded programming and hardware validation. I developed an intrusion alarm controller on the MSP432P401R using register-level GPIO and state-based logic, and I have characterized analog circuits by comparing hardware measurements with simulations. Through GrowYourTime, I contributed to the design and frontend development of a productivity application using Figma, React, and TypeScript. These projects have strengthened my ability to learn new tools, troubleshoot carefully, and collaborate across disciplines.

I also enjoy working directly with people. While teaching robotics and programming at iCode, I learned how important patience, clear explanations, and curiosity are when helping someone build confidence with technology. Those same values shape how I work on a team: I ask questions, listen, and look for solutions that are both technically sound and genuinely useful.

I would welcome the opportunity to contribute my embedded systems, software, testing, and problem-solving skills to a team developing thoughtful products and services. Thank you for considering my background. I would be glad to discuss how my experience and motivation could support your work.

Sincerely,

Smridhi Subedi
